3-5 days* (GBR)

Magnetic contact MK4W VdS Magnetic contact and magnet to be installed in window and door frames to monitor opening. Magnetic contact and magnet are installed facing each other or in parallel in the window frame/door panel and window base/door base. Series connection of magnetic contacts in the reporting line possible. Type of contact: 1-pole closing contact, switching voltage: max. DC 100 V Capacity: max. 10 W Operating voltage: max. 40 V Connecting cable white: 10 m LIYY 4 x 0,14 qmm, VdS-No.: G 191 556 Color: white, Delivery volume: magnetic contact, magnet, with 2 pcs. casings, white (AGW) Info: In order to analyze the contact information in the EIB the magnetic contact has to "be prepared" for bus use first. This can be done in different ways. For example, if you want to connect the contact locally to the EIB, that means you do not want to put the line directly to a central evaluation center (such as electrical distribution) the best way is a connection using a push button interface (2-fold, 4-fold, 8-fold). For central registration the binary inputs REG (series built-in device for electrical distribution) are suited best. In general, these are 24 V-AC/DC binary inputs, that means a voltage (24V) is sent to the contact which is then analysed at the binary input (edge analysis). For example: leading edge (window closed) there are 24 V at the binary input ----> "OFF" bus telegram and decreasing edge (window open) there aren't 24 V at the binary input ----> "ON" bus telegram. You can use this information to regulate the heating when the window is open to ensure frost protection or alert and display messages. In general, these contacts are registered room by room that means one binary input contact per room.

* Note on delivery time: Day = Monday to Friday, no public holiday in Bavaria or Saxony. Goods are also delivered on Saturdays (DHL).

** Payment methods may vary from country to country. All prices plus shipping and excluding customs duties or other additional costs (import sales tax) for deliveries outside the EU.

*** Savings compared to RRP = the manufacturer's recommended retail price. RRP is the price recommended to retailers by the manufacturer, importer or wholesaler as a resale price to the customer. The RRP is also referred to as the list price and is defined as the highest possible price that a buyer would pay for a specific product before any discounts (Source of gross list prices: Germany).
