DALI wall panel 100-240V/AC DALWPWWCW Dynamic design, DALI control type, number of color channels 2, programmable, plastic housing, built-in, output voltage 0V, input voltage 100 ... 240V, max. output current 0A, protection class (IP) IP20, Protection class II, length 86mm, width 86mm, height 45mm, diameter 0mm, loads with variable color temperatures can be controlled with the DALI wall panel. Since it is a tunable white wall panel, two DALI addresses are required. The color temperature is set using the touch wheel. In addition to the four preset dimming levels, it is also possible to save up to four light scenes. Since the wall panel acts as a BUS transmitter, the use of the DALI base station is optional, but not absolutely necessary. When operated as a BUS transmitter (without DALI base station), the connection is made to 230V, whereby a maximum of 50 participants can be controlled via a wall panel. In addition, 3 additional wall panels can be integrated into the system, which are operated via the BUS voltage of the first wall panel (BUS encoder). When operating with the DALI base station, a maximum of 4 wall panels can be used per base station. The wall panels must not be operated with 230V, but exclusively with the BUS voltage of the DALI base station. In addition, there is the possibility of operating two wall panels via 230V in one system, with only one of the wall panels acting as a BUS transmitter. This allows up to 100 participants (50 per panel) to be controlled. Two additional wall panels can be integrated into this system via the BUS voltage, whereby the controllable number of participants remains unchanged. It can be mounted on switch boxes without any problems. Please note: The panel sends a broadcast command that switches all components within a BUS system to linear dimming. This function cannot be switched off.
