Fan timer relay LTRk-E12 24AC/DC Design of the electrical connection Screw connection, function with ON-delay, function with OFF-delay, rated control supply voltage U_s at AC 50 Hz 24 ... 24V, rated control supply voltage U_s at DC 24 ... 24V, type of voltage for actuation AC/DC, time range 1,5 ... 30s, number of outputs, delayed, NO contact 2, suitable for DIN rail mounting, width 22.5mm, height 75mm, depth 100mm, the fan timer relay was specially designed to control two-stage motors. ON and OFF delays are separately and infinitely adjustable. It is controlled with a two-stage switch. The motor contactors are controlled with the two mutually locked outputs. How it works: 1. If level 2 is selected directly, level 1 is switched on first for the set start-up time so that the fan can run up to the nominal speed. After that it is activated in stage 2.2. When switching back from level 2 to level 1 or to the OFF position, a switch-off delay is triggered so that the fan can coast down before level 1 is activated.3. If level 1 has already been switched on for at least the set start-up time, the changeover to level 2 takes place immediately. When switching from level 1 to 2, the interruption must not exceed 250 ms. If this time is exceeded, the procedure is as described in point 1.
