14-16 days* (GBR)

Interfacing relay SAR 5 design high-current switching device, mounting type DIN rail, when a control voltage is applied (e.g. incoming ringing voltage of a telecommunications connection line), the SAR switches an external signal generator (e.g. bell, horn or lamp) with its own or .separate power supply on. External signaling can be switched on or off with the built-in switch. The SAR 5 is connected to a telecommunications connection line or a DC voltage signal source and controlled by the ringing voltage or the control voltage. With the help of two potentiometers, the call pause bridging and the duty cycle limitation of the SAR 5 can be set individually. This makes it possible to connect a wide variety of devices such as flashing lights or impulse switches. The SAR 5 has a changeover contact for connecting the devices. The DIN rail housing ensures clean installation and a concealed connection in the distribution box. The SAR 5 only reacts to the control voltage, not to selection impulses (IWW). Supply voltage: 24V AC/DC
